As per FAO statistics, current World Population is around 8 billion, of which, around 820 million people suffer from hunger and about 2 billion children are malnourished and suffer from micronutrient and vitamin deficiency worldwide. Hence, Food Security is a major concern globally and more so in developing countries of Africa, Asia and Latin America. Prudent technologies in Agriculture and Biotechnology have been engaged globally to boost food production. Also, Food Sciences are harnessed to process food materials and to minimize the food losses. Still, food security is at crossroads considering the WHO recommendations for daily intake of nutrients. Malnutrition is distressing mainly in developing countries. Also, the food imbalances in developed countries have their own consequences in terms of Obesity, Diabetes, Cardiovascular diseases, Cancer etc.

Such an alarming situation needs a critical appraisal about global food security in relation to the target set by UN Sustainable Development Goals. Current global hunger index is about 18.3 which is more chronic (GHI 27) in south Asia and Sub-Saharan Africa. Even in India the GHI is 13.7. This International Webinar provides a platform for the luminaries to share their views for general awareness of common people, researchers and policy planners to achieve the target of Zero Hunger by 2030 or later. Eminent speakers shall deliberate on various aspects of food security globally and in different region of the world. This webinar will be useful for researchers, scholars and students of Agriculture, Food and Nutrition, Management Studies and Health Sciences, Food Policy Professionals, Development Functionaries and Policy Planners. The participants can join webinar without any fee however, pre-registration is required. The registration can be done on the following link. All registered participants will get e-certificate.
